TRANSCRANIAL MAGNETIC STIMULATION SCREENING FORM

Transcranial Magnetic Stimulation (TMS) uses brief magnetic pulses to stimulate the brain cells near the scalp. There is a potential for the pulses to interact with nearby metal and/or electrical devices, thus we restrict any metal or electrical devices within one foot of the TMS wand. There is evidence that the TMS can induce fainting and, in rare cases, cause seizures. Therefore, participants with any history of epilepsy or seizure will be excluded. In addition, the system is loud, and participants will be provided hearing protection.
